## PROFESSIONAL SUMMARY

Frontend Developer with 5+ years building scalable React and TypeScript applications, most recently for a global investment bank. Strong in component architecture, server-state management, performance, and testing, with a track record of shipping products end to end.

## TECHNICAL SKILLS

**Core:** React, TypeScript, JavaScript (ES6+), Next.js, Angular, HTML5, CSS3

**State & Data:** TanStack Query, Redux Toolkit, Zustand, Context API, REST APIs, Supabase/Postgres

**UI & Styling:** Material UI, Tailwind CSS, shadcn/ui, Radix, Chart.js, responsive and mobile-first design

**Testing & Tooling:** Jest, React Testing Library, Playwright, Nx monorepo, Git, CI/CD, Docker

**Additional Skills:** PWA / service workers, OAuth / WebAuthn, Adobe Analytics, Node.js

## WORK EXPERIENCE

**Senior Frontend Developer** | Synechron, Bengaluru

*Apr 2025 - Present*

- Develop and maintain React and Angular applications for a global investment bank within an Nx monorepo, building reusable component libraries and pilot features; targeted performance work delivered a ~35% improvement in load and interaction metrics.
- Own API integration and server-state management with TanStack Query, cutting redundant network calls by ~30% through query caching, deduplication, and invalidation strategy.
- Instrumented Adobe Analytics tagging across key journeys to track user interactions and inform product decisions on pilot features.
- Trigger builds and deployments and coordinate delivery across release, QA, infrastructure, and UX teams; raised test coverage by ~40% with Jest and React Testing Library, and introduced AI-assisted development workflows for the team.

**Frontend Developer** | Insurite Private Limited, Bengaluru

*Aug 2022 - Mar 2025*

- Delivered new features, enhancements, and bug fixes across multiple client products, and supported other teams with hands-on development.
- Led migration of legacy class-based JavaScript applications to React with Hooks and TypeScript, cutting technical debt and improving maintainability.
- Optimised performance with React.memo, useCallback, useMemo, lazy loading, dynamic imports, and code splitting to reduce bundle size and time to interactive.

**Software Developer** | Capgemini, Bengaluru

*Mar 2021 - Jul 2022*

- Built a form code generator in Angular that produced ready-to-use form components from a schema definition, cutting repetitive development effort across the team by ~30%.
- Delivered Angular and ASP.NET features for a client in the agricultural machinery sector, working with backend and QA across multiple release cycles.

## PROJECTS

**RJ Jewellers** — Next.js 16 (App Router), React 19, TypeScript, Tailwind v4, Supabase

- Built an end-to-end e-commerce platform for a bridal jewellery retailer — storefront (catalogue, cart, COD checkout, order tracking, reviews) plus a full admin console (orders, products, bulk .xlsx import/export, coupons, roles).
- Stored money as integer paise and recomputed every total in Postgres RPCs so client prices are never trusted; added RLS, nonce-based CSP, transactional email, Playwright E2E tests, and a multi-stage Docker deploy.

**Millmate** — Oil Mill Ledger — Next.js 14, TypeScript, Tailwind, shadcn/ui, Supabase

- Replaced an oil mill's Excel balance sheet with a mobile-first PWA tracking stock by grade, purchase orders, sales commitments, and raw-material yield, with all business formulas in one tested module.
- Used Supabase Realtime for day-scoped state so multiple devices stay in sync, plus a service worker keeping the app usable offline on the mill floor.

## EDUCATION

**B.E., Information Science and Engineering (First Class)** | Basaveshwar Engineering College, Bagalkot | 2020
